The the order of hardware assembly on Fiberglass Brackets with a star washer option (Catalog numbers ending in “W” or “WC”) are having the order of the associated hardware revised so that the star washer sits against the end fitting of the bracket as opposed to between the lock washer and hex nut. See the Figure 1 for a visual diagram of the change.

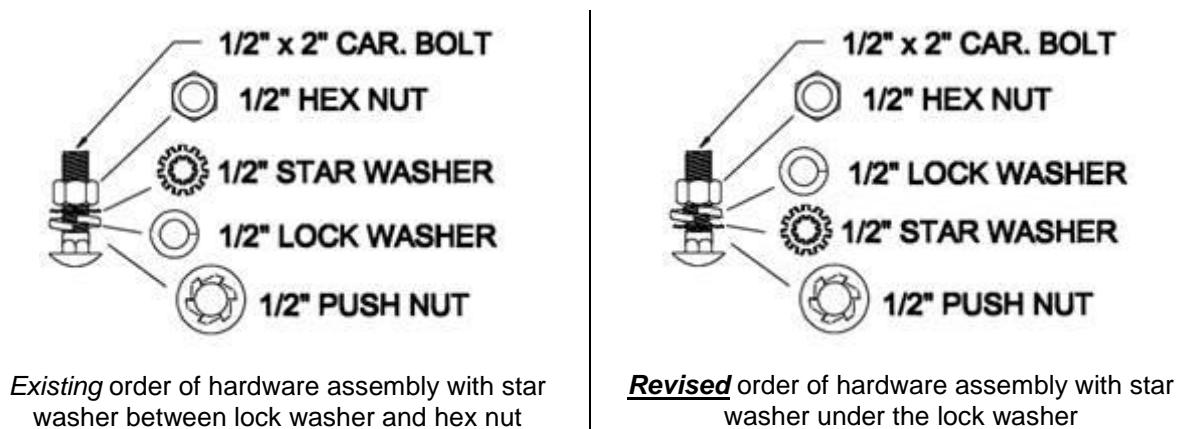

Figure 1 – Order of hardware assembly on fiberglass brackets with a star washer option

This change makes it easier for end users to assemble the bracket in the field without having to reconfigure the order of the hardware when attaching equipment to the bracket and reduces the chance of operator miss-installation.

This change has been implemented as of December 1, 2019 and there are no changes required to existing catalog numbers. Please contact your MacLean Power Systems Sales representative with any further questions or for additional assistance.
